Wireless Reach. ies INTEGRATED INNOVATION IN EDUCATION NSF

Modular and Personalized

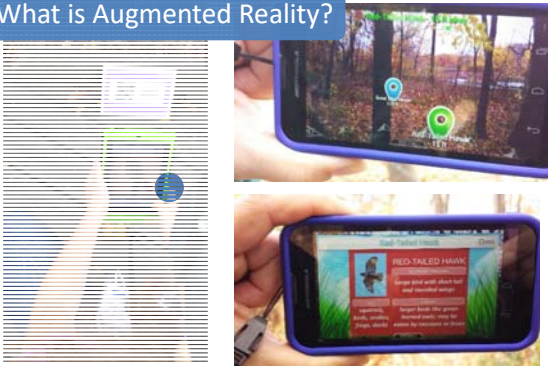

Sit and Stay

How does this analogy map on to our education system?

What role does technology play in reimagining spaces for learning?

What is Augmented Reality?

QR code-based

Location-based

Mobile Broadband Devices

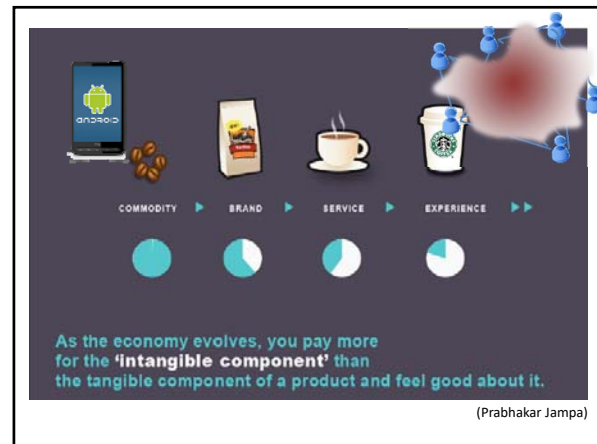

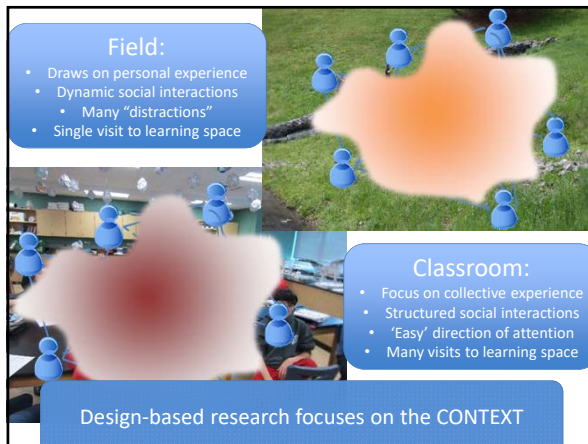

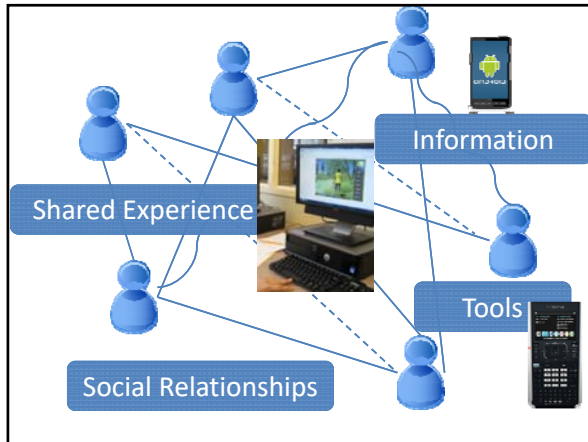

EcoMOBILE

Fresh Air

Augmented Reality

ARIS

Environmental Probes

EcoMOBILE is about BLENDING EcoMUVE and outdoor field trip experiences supported by mobile tech.

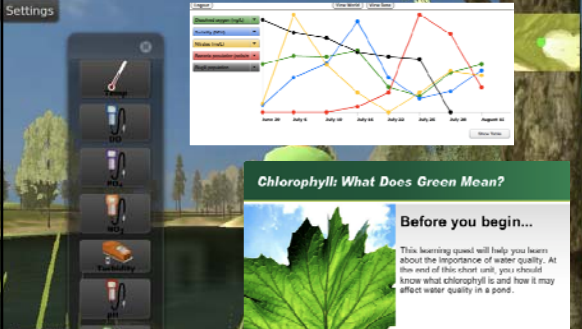

EcoMUVE Experience = Take on the role of a scientist and investigate why the fish died.

Changes over time

Perceptual Clues

Chlorophyll: What Does Green Mean?

Before you begin...

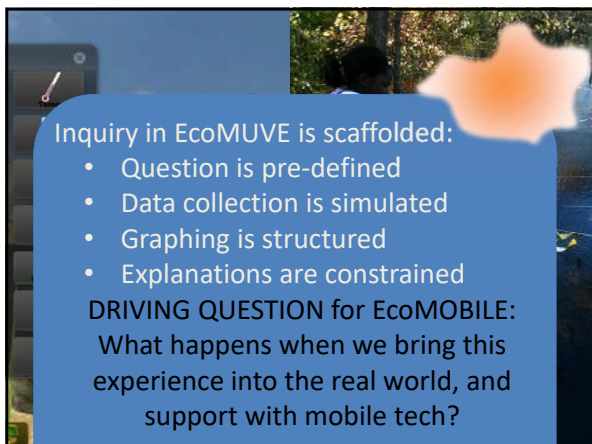

This learning space will help you learn about the importance of water quality. At the end of this short unit, you should know what chlorophyll is and how it may affect water quality in a pond.

Data and Graphs

Similarities in surface and deep features of a learning environment should promote transfer to new situations.

(Goldstone and Sakamoto 2003)

Inquiry in EcoMUVE is scaffolded:

- Question is pre-defined
- Data collection is simulated
- Graphing is structured
- Explanations are constrained

DRIVING QUESTION for EcoMOBILE:
What happens when we bring this experience into the real world, and support with mobile tech?

Design intentions for EcoMOBILE experience:

- Give students agency in collecting and analyzing data in realistic scenarios
- Show that what they learned in the classroom holds relevance when they step outside
- Offer the ability to see and notice things they may not have known were there
- Support opportunities to work together to solve a problem

HOW DO WE KNOW IF WE'RE MEETING THESE GOALS?

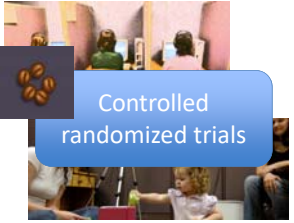

A tension in education research

The cognitive perspective

The situated perspective

Controlled randomized trials

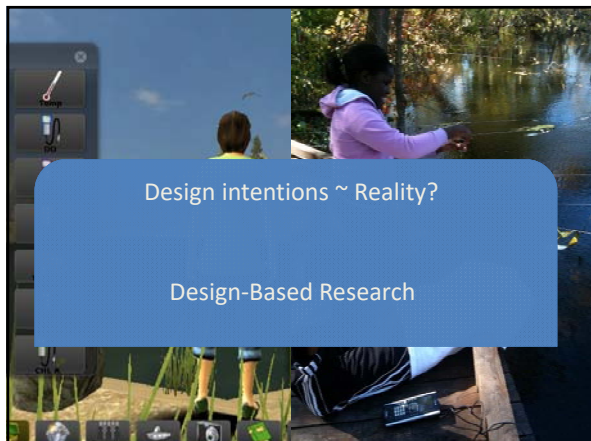

focus on individual cognition and memory
context for learning is tightly controlled

Mixed methods research (and DBR plays a role)

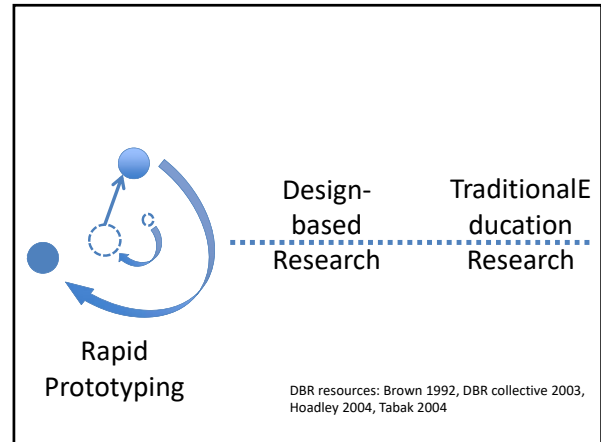

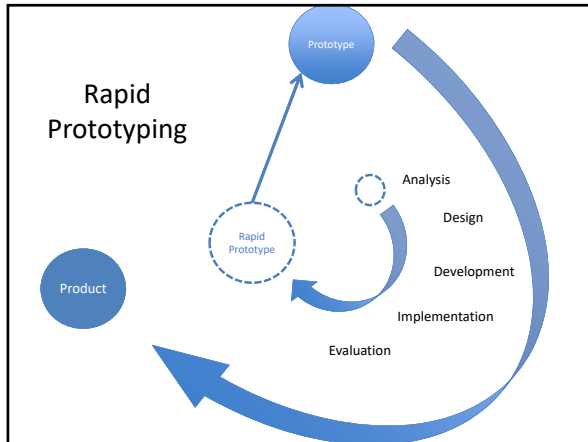

Focus on material and representational resources available
context for learning is inherently social

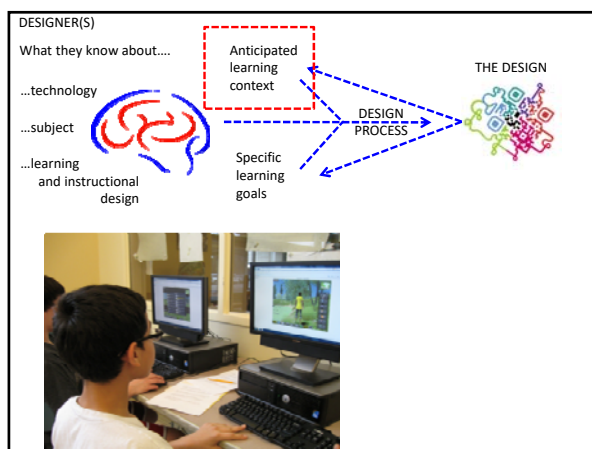

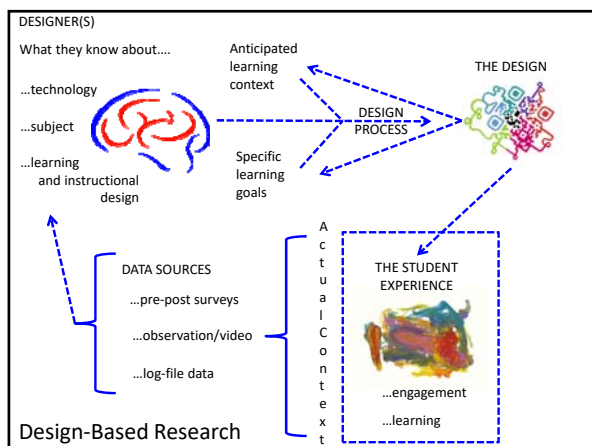

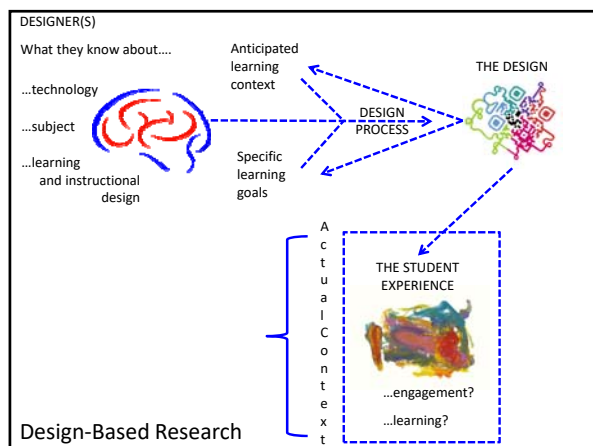

(Greeno 1997; Anderson et al. 1996, 1997; Cobb & Bowers 1998)

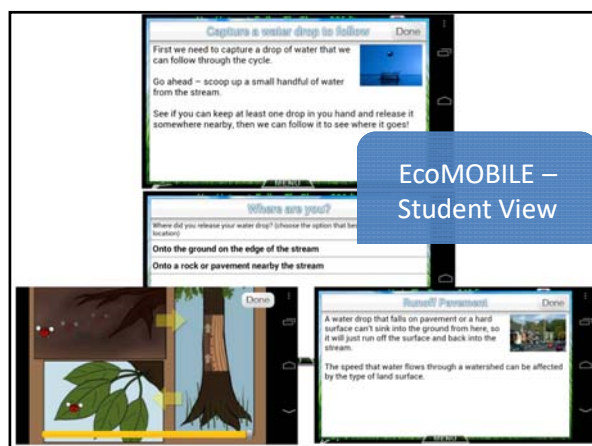

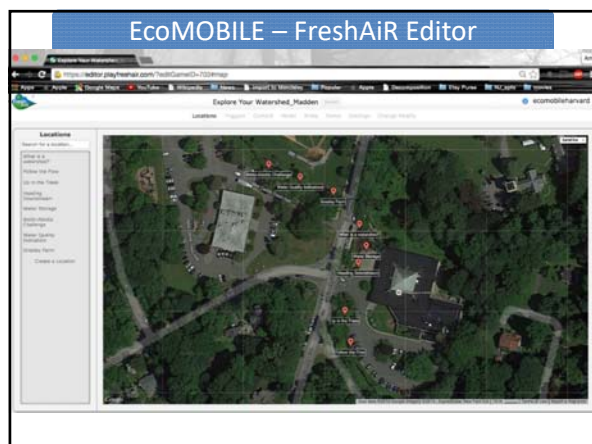

Design intentions ~ Reality?

Design-Based Research

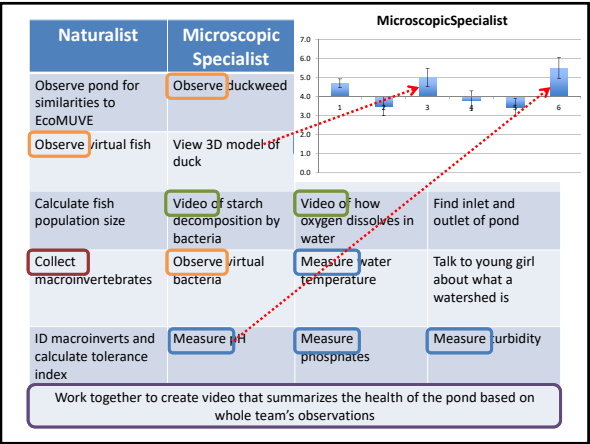

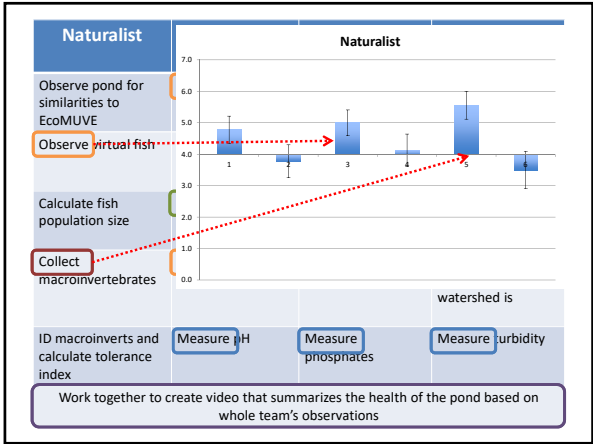

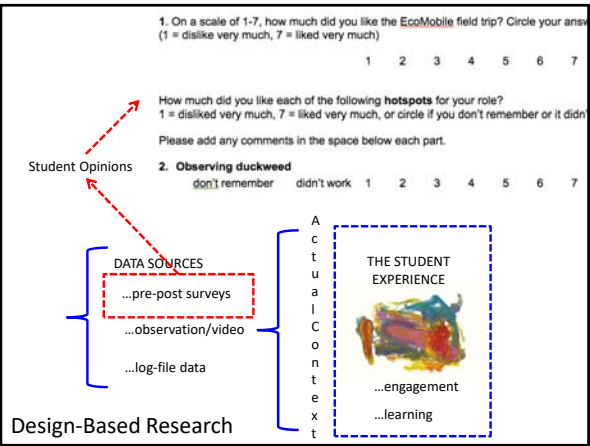

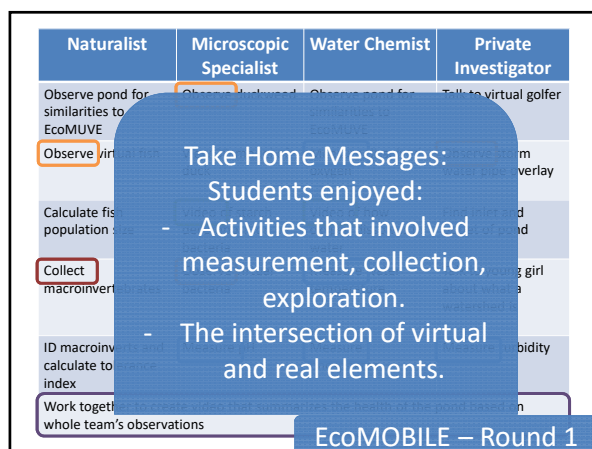

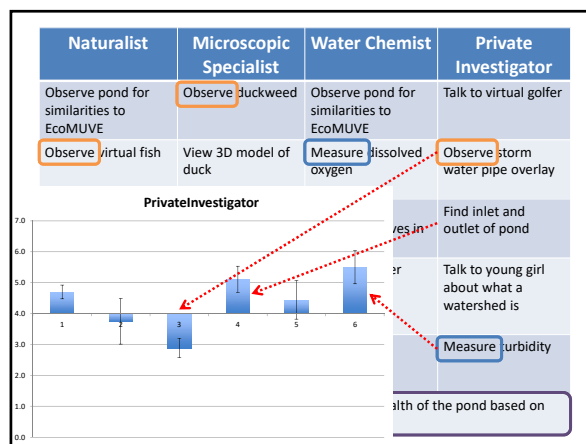

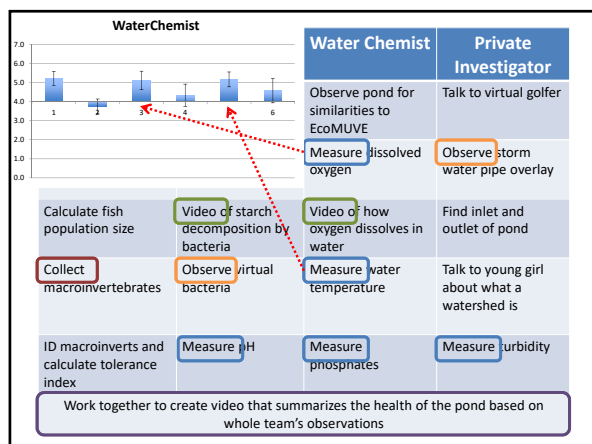

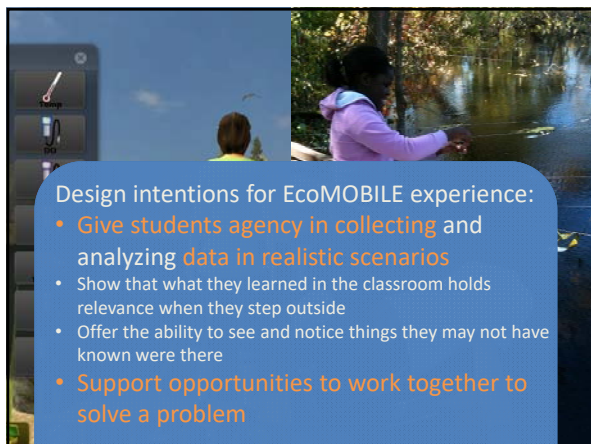

Naturalist	Microscopic Specialist	Water Chemist	Private Investigator
Observe pond for similarities to EcoMUVE	Observe duckweed	Observe pond for similarities to EcoMUVE	Talk to virtual golfer
Observe virtual fish	View 3D model of duck	Measure dissolved oxygen	Observe storm water pipe overlay
Calculate fish population size			Find inlet and outlet of pond
Collect macroinvertebrates			Talk to young girl about what a watershed is
ID macroinverts and calculate tolerance index	Measure pH	Measure phosphates	Measure turbidity
Work together to create video that summarizes the health of the pond based on whole team's observations			

EcoMOBILE – Round 1

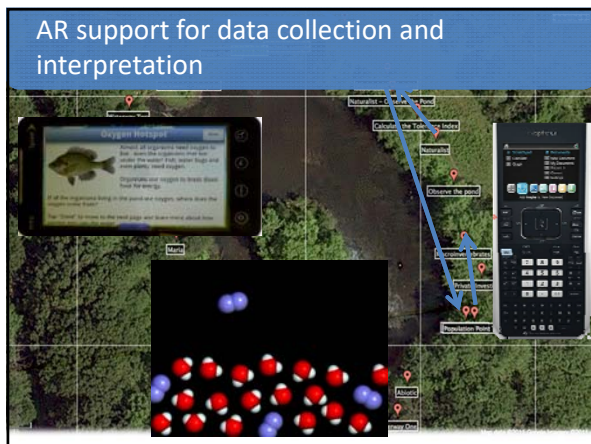

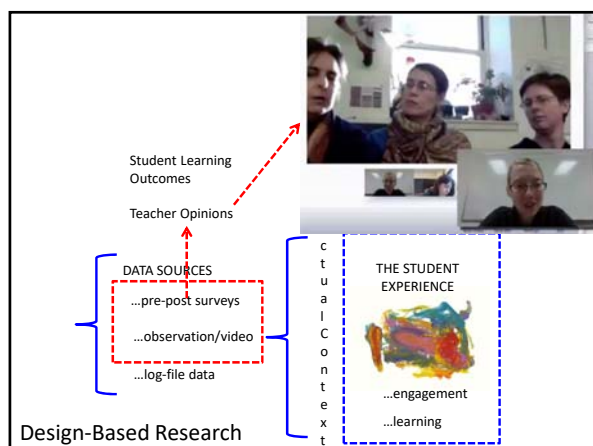

Design intentions for EcoMOBILE experience:

- Give students agency in collecting and analyzing data in realistic scenarios
- Show that what they learned in the classroom holds relevance when they step outside
- Offer the ability to see and notice things they may not have known were there
- Support opportunities to work together to solve a problem

AR support for data collection and interpretation

Post-survey results:

- increase in understanding of water quality variables
- self-report opinion and affective survey increase in:
 - understanding scientific practices,
 - causes of ecological change,
 - self-efficacy related to using tables and graphs

The TEACHERS' experience

"It felt like 90% of the time they were at the pond environment, they were working on interacting with the pond and their partner, whereas previous times it felt like it was maybe 60 or 50% of their time they were independently interacting."

"They're getting to see parts of the world that they don't see, like the microscopic creatures, what the pH level is, they're getting to see things that they didn't know existed"

(Photo: Alan English)

The TEACHERS' experience

"I was able to work a little more one-on-one and with small groups, I just traveled around and checked in with kids, I wasn't directing things, that felt really different to me, and I really liked it... It felt more like what I like to think of teaching as being - not just directing top-down."

Chlorophyll: What Does Green Mean?

Before you begin...

This learning quest will help you learn about the importance of water quality. At the end of this short unit, you should know what chlorophyll is and how it may affect water quality in a pond.

Data and Graphs

Jun 30

Quantitative Results from Pre-Post Survey

Construct	Mean (Pre) SD	Mean (Post) SD	Effect Size	T-test, p-value
Describing Data	10.5 (± 0.41)	10.8 (± 0.32)	NS	$T_{73} = -0.88$, $p = 0.38$
Understanding Variability	21.5 (± 0.42)	22.4 (± 0.37)	0.26	$T_{72} = -2.28$, $p = 0.025$
Supporting Claims with Evidence	15.9 (± 0.49)	17.4 (± 0.47)	0.37	$T_{66} = -2.61$, $p = 0.011$
Context (near)	0.38 (± 0.49)	0.77 (± 0.66)	0.67	$T_{86} = -4.67$, $p < 0.001$
Context (far)	0.88 (± 0.43)	0.9 (± 0.44)	NS	$T_{78} = -1.34$, $p = 0.19$

(Cooke, Kamarainen, Bressler, Metcalf, Grotzer & Dede, NARST 2016)

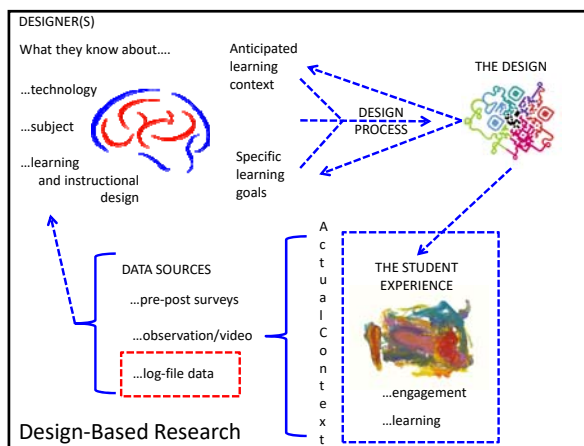

Qualitative Coding of Student Explanations

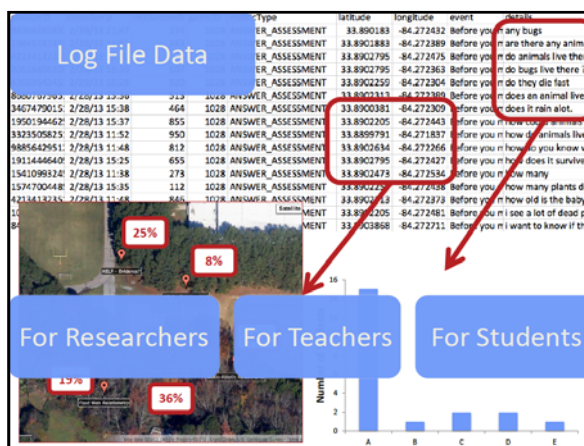

Design intentions for EcoMOBILE experience:

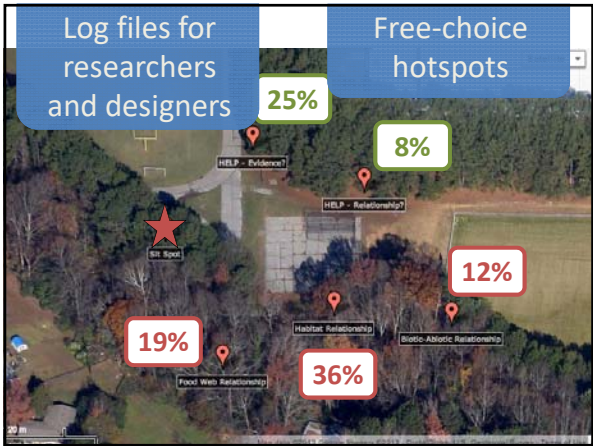

- Give students agency in collecting and analyzing data in realistic scenarios
- Show that what they learned in the classroom holds relevance when they step outside
- Offer the ability to see and notice things they may not have known were there
- Support opportunities to work together to solve a problem
