Prologue

The headlines of July 20, 2011, were typical fare for a summer news cycle. Congressional leaders and President Barack Obama were negotiating an agreement to forestall the forecast calamity of breaching the U.S. government debt ceiling. Embattled News Corporation Chairman and CEO Rupert Murdoch was fighting to keep his company's phone-hacking scandal under control, and British Prime Minister David Cameron was trying to limit his own entanglement. Financial markets ended the day with slight declines. Corn prices fell because of hopes that rain would limit a heat wave.

Less prominent, though still in the headlines, was the United Nations declaration of a famine in southern Somalia as the Horn of Africa experienced its worst drought in six decades. Food assistance is a way of life for many in that part of the world, the result of poor rains and poorer people, but a famine is a problem of a higher order; for a United Nations famine designation, malnutrition rates among children in an area have to exceed 30 percent; more than two people per 10,000 must die from hunger-related causes each day; and people have to be unable to access food and other basics of life because they're either nonexistent or simply too expensive.

The Dadaab refugee complex in neighboring Kenya, built for 90,000 people, was caring for more than 400,000. Across the Horn of Africa, more than 11 million people were threatened as farms failed and food costs tripled. Tens of thousands had already died before the declaration was made. Aid appeals ranged from \$120 million to \$300 million to \$1.6 billion. Distribution of aid would be difficult, given the civil war raging in Somalia, a nation that hasn't had a functioning central government for two decades.

Maybe that's why the famine in Somalia wasn't the top news that day. Famine and warfare in Africa: Where's the surprise? Suffering is easier to forget when it seems constant. In the rush for the newest scandal or the latest score, the everyday tragedy of worldwide hunger may fade into the background. An overcrowded camp holding the equivalent of the population of Wichita, Kansas, and a population equal to that of Ohio being threatened

xi

with starvation are both depressing, but seemingly far away from the citizens of a well-fed nation. Maybe it's seen as inevitable, yet malnutrition is unnecessary today. Each person on the planet can be fed with existing agricultural production. With the right decisions, people threatened by famine today could even feed themselves—and help out the rest of us tomorrow, when we will need one another to thrive on a crowded planet.

This is a book about globalization—its (intended and unintended) consequences, its challenges, and its opportunities. It is about violent collisions and everyday hopes. It is a journey into hunger, wild markets, and the global food business, featuring the world's most humble farmers and its most powerful leaders, all seeking answers in an increasingly uncertain world. And it's about how new connections being forged can make famine a memory.

To feed everyone, we need everyone. To make famine a memory, we first must stop forgetting about it. And we have to understand and explore the ties that bind the fortunate to the famished.

We begin.
